

Top Display Repair Instructions

Greetings! The Top Display of the Acura RL has a common problem that develops over time – the digits blink off without warning, and you often have to hit it with your hand to get them to come back on. It's very frustrating!

This is a simple guide for our customers on how to remove your top display and send it in to RL Designs. We will repair your display SAME DAY and turn it around inside of 24 hours back to you, so you don't have to do without it very long. We know how important this display is in the car, and we want to get you back up and running quickly! **Price for this service is \$40 US which includes same day service and we cover return shipping cost within the US.**

PLEASE FOLLOW THE INSTRUCTIONS BELOW:

Recommended Tools

(won't damage plastic or painted surfaces)

Plastic pry tools

A set of these is not required, but they're very inexpensive to buy, and come in handy for many car repair tasks. You can get these most anywhere tools are sold, hardware stores and home centers, Harbor Freight, Northern Tool, and even in many Walmarts in the tool section.

**Flat Blade
Screwdriver**

If you can't find plastic pry tools, any flat blade screwdriver, or even a dull butter knife can be used to pry the display up. Whatever tool you use, be cautious about damaging the dash plastic or other parts. The display is fairly easy to pop out with a little persuasion with a decent tool.

**Phillips
Screwdriver**

A Phillips screwdriver is needed to remove the digital assembly from the center speaker housing – only 2 screws to remove.

Step 1: Pry up the Top Display

This Top Display unit is held in place with 4 push fasteners, one on each corner. Pry it up carefully.

Step 2: Unplug these 2 cables

These photos show the 2 connectors to unplug. Squeeze the tab in the middle to release the connector. There is no harm in disconnecting these.

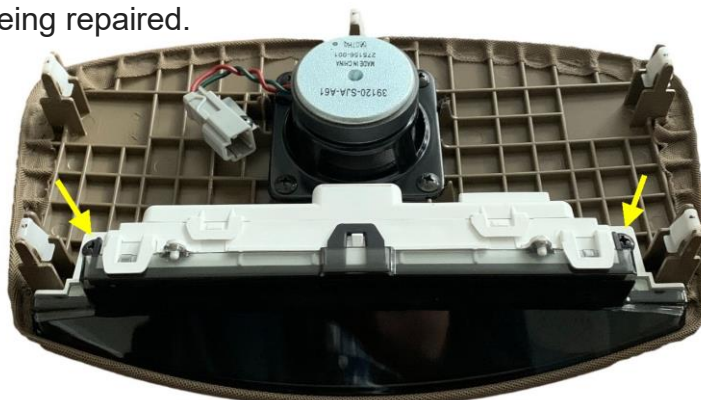

Center Speaker Plug

Digital Display Plug

Step 3: Remove 2 Display Screws

Yellow arrows show the 2 screws to remove. This gets you down to the digital display unit by itself, which is cheaper to ship than the whole assembly. You can reinstall the assembly back in your car without the digital display while it's being repaired.

Note: Your radio and HVAC will work just fine without this display. You just won't be able to see the digits while the display is out of the car for repair. Small price to pay though to get this fixed!

You only need to send in this digital display!
Keep the center channel speaker and cover in your car. It's cheaper just to ship the small digital display.

Step 5: Package Display and ship

Locate a suitable small box, cardboard tube, or sturdy padded bubble mailer to ship the display. Your local UPS store or similar shops will have just what you need. The smaller and lighter the package, the cheaper it will be to ship.

Be sure to use proper bubble wrap or cushioning to ensure the display doesn't get broken or crushed in shipment.

IMPORTANT: Be SURE you include a NOTE in the package with your NAME, Return Address, Email Address, and CELL NUMBER! Print clearly and legibly!

We get a lot of these packages, so we need to know which one goes where. We need your information so we can contact you directly to arrange the repair and payment!

Cost for this service is \$40 US which includes 24hr turnaround and we pay return shipping within the 50 US states! (shipping outside of USA will be an extra cost – contact us directly to discuss)

Step 6: Ship the Package

Generally, US Postal Service is the cheapest for a small package. Price will depend on size/weight of package and your distance from Florida. **Price for this service is \$40 US which includes same day service and we cover return shipping cost within the US.** When we receive your display, we'll contact you directly to arrange payment, and repair it. We use PayPal to process payments securely, and we cover the "goods and services" PayPal fee.

Ship your display to:
RL Designs
1726 Indian Town Lane
Tallahassee, FL 32312

Let us know if any questions arise.

Sincerely,
Steve
